

Light & Building - Frankfurt 2010

I have more meetings arranged for Light and Building this year than I can ever remember, so it should be a very busy and successful show.

We have a number of new Crescent products on display and are sharing the stand with Endo, as we are distributing their comprehensive LEDZ range in the UK. This has enabled Crescent to tackle a wide range of new projects and we are looking forward to a very successful 2010.

I recently visited one of the Endo factories in China, just outside Shanghai, which was very impressive. They have more than 300 people manufacturing the LEDZ range in carefully controlled production lines, and they are almost fully vertically integrated right from heatsink casting (in house) through to painting and final assembly. They buy such large volumes of LEDs that they have been able to secure tight binning and this means consistent colour throughout the range.

Of course other Crescent LED lighting solutions will be on show including representatives of all the linear CL range, and featuring the new exterior rated CLI RGB modules with integral drivers and interlink capability.

Energy saving, green issues, renewable energy sources, Part L and Leeds/Ashrae for the international markets, have certainly changed the emphasis when working on large projects. Total cost of ownership is an important part of new build as well as refurbishments and we are able to offer some very competitive products.

Please drop by to have a look.

Michael Morrison

ENDO in Focus

The new Endo LEDZ range will form the main part of the stand shared by Crescent, Endo Lighting & LBM (our German distributor). The all new R series of LED downlights, spotlights & exterior fixtures will be on show, with a full size retail display area showing both conventional and LED products. This will demonstrate the effectiveness of the LED solution in replacing the more conventional technology – and in saving energy & running costs.

All products in the R series feature a replaceable LED module with a five year guarantee. There are an amazing nine module sizes ranging from 3 to 36 LEDs (7 to 66W) so these products have the potential to replace HQL and large compact fluorescent lamped fixtures in many retail & commercial situations.

Crescent light Serres Perfecture in Greece

This building belongs to the authority responsible for the local area or Perfecture in the Greek town of Serres. The Perfecture covers an area of nearly 4000 square kms with a total population of about 200,000 and is situated in the Central Macedonia Periphery about 500 kms from Athens, and about 25 from the border with Bulgaria. Our distributors for Greece, Gravani Bros, based in Thessaloniki, were asked to provide a lighting scheme for the front of the building, and chose the CLV linear LED system to wash light up the columns and other elements of the facade. A combination of CLVO400 & CLVSE2000 in warm white were used, all resin encapsulated for protection to IP67. Over 50 metres of the products were used in total to cover the front of the building.

Fibre Optic 'Doodle' in Frankfurt

Leolight design are showing the interactive light sculpture Doodle at the Heyne Kunstfabrik in Offenbach, near Frankfurt. The special solo exhibition runs alongside the Luminale 2010 event.

Leolight have constructed 'Doodle' using BPAK100 side emitting fibre and a CRE6255 projector, making great use of its flexibility.

Sandra Decker lighting partner in Leolight describes the concept of the piece - "Initially the Doodle is a simple, linear light sculpture. However the Doodle is not predefined by the artist. Instead the fibre-optic light installation inspires visitors to experience and interact with light. They sculpture their own linear light installation and become the creators of the Doodle". If you are visiting Light & Building, we

hope you will be able to find time to visit the exhibition at Heyne Kunstfabrik in Offenbach between 18 - 21.00 hours on 11 - 16th April - come to touch and play - and be the creator of your own very own Doodle!

Crescent Lighting have distributors and exclusive partners throughout the UK, Mainland Europe and the Middle East. Energy Focus Inc. have distributors worldwide.

Cabot Circus Wins Award

Cabot Circus shopping centre in Bristol won the retail section of Lighting Design Awards for Pinniger & Partners at the Hilton Hotel in London on 12th March. A great deal of CLO linear LED system was specified by Pinnigers for the project and used in several external areas as well as extensively inside. Well done to Ian Payne and Tim Downey at Pinnigers!
